JOURNAL OF ELECTRONIC MATERIALS – Volume 10, 1981

The *Journal of Electronic Materials* provides a common forum for rapid dissemination of the results of original research on all materials of interest in the field of electronics. Representative fields of activity for which manuscripts are invited include materials for memory, logic, display, interconnections, packaging, detectors, emitters, large stores, and hard copy. In addition, general papers relating to the processing of electronic materials for device applications, structure making, reliability and yield, etc., are welcome.

The journal also selectively publishes invited and contributed review papers on topics of current interest, to enable those in the field of electronics to keep abreast of activities in areas peripheral to their own. The journal also publishes the proceedings of the annual conference sponsored by the Electronic Materials Committee of The Metallurgical Society of AIME.
